

# The relevance of WHO FCTC for waterpipe tobacco control policies in light of decisions of COP8

## Waterpipe Tobacco Smoking Regulatory Challenges

KH Webinar Series-December 13, 2018

Rima Nakkash, DrPH

Associate Professor, Health Promotion and Community Health

Department, Faculty of Health Sciences

Coordinator of the AUB tobacco control research group

Associate Director , Knowledge to Policy Center

Co-Director, KH-WTS

# Waterpipe Tobacco Smoking

- WP is known under different names:  
*shisha, narghile, arghile, hookah, hubble-bubble, goza*
- WP has different designs
- Misconception about its safety
- Use on the rise worldwide, mostly amongst youth

# **WTS: Factors that Contributed to Increased Use & Prevalence**

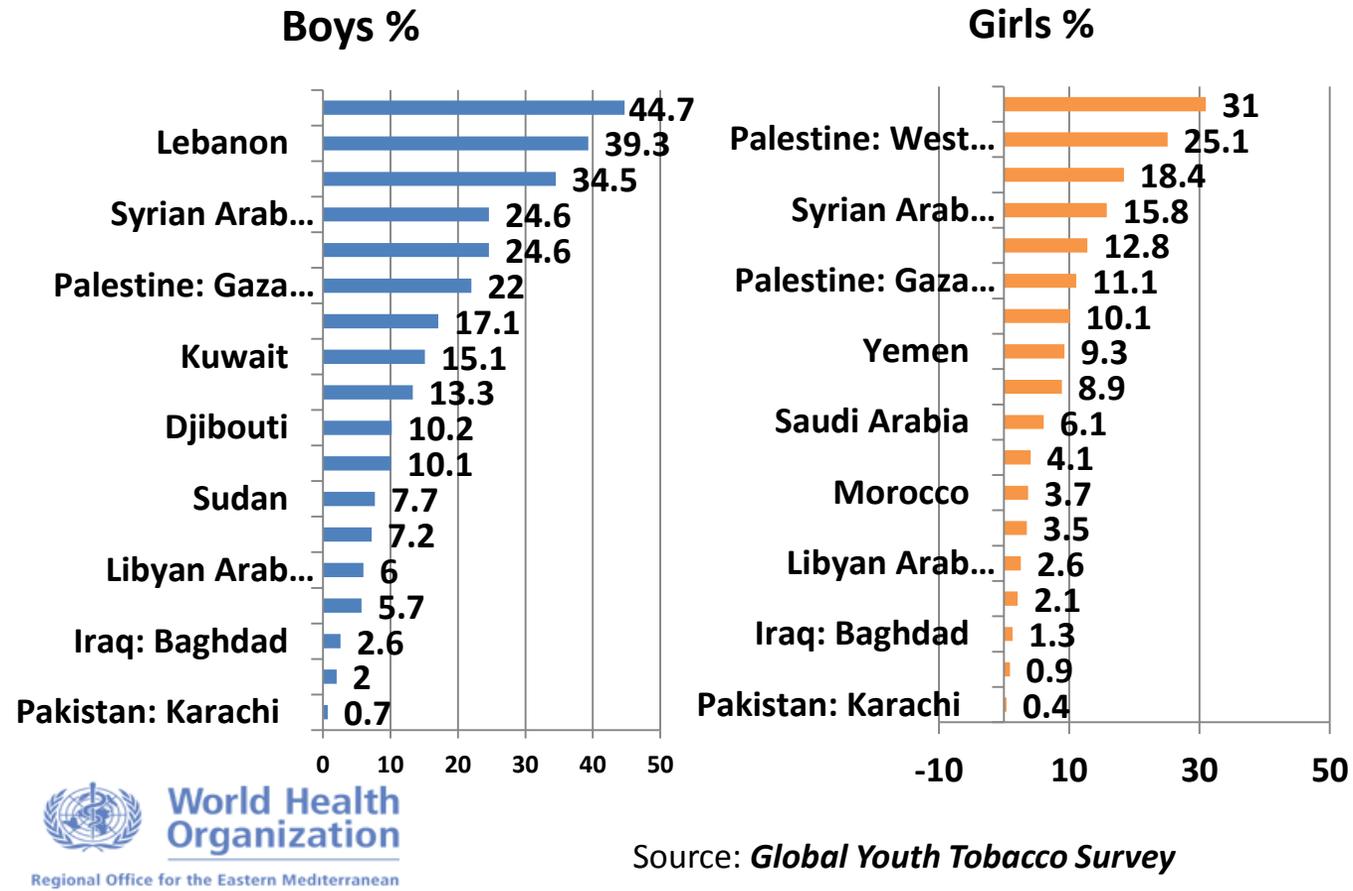

- Introduction of flavoring which reduced harshness
- Perception as healthier than other tobacco products
- Affordability
- Quick lit charcoal
- Social media and Tourism (allure of WP)
- Social acceptance and Waterpipe cafes
- Lack of WP specific policies and regulations
- Immigration patterns from countries with high prevalence of use to low prevalence countries

# The Prevalence and Trends of Waterpipe Tobacco Smoking: A Systematic Review

- 129 studies reported 355 prevalence estimates of waterpipe tobacco smoking 68 countries.
- Among adults, highest prevalence estimates were in the Eastern Mediterranean region.
- Among youth, highest prevalence estimates were in both the Eastern Mediterranean and European regions.
- Highest Prevalence Estimates:
  - 37.2% of Lebanese youth used WP during the past 30 days (2008)
  - 65.3% of Lebanese youth (2002) and Lebanese university students (2005) had ever used WP
  - 16.3% of Iranian university students had regular or occasional WP use (2005)
  - 10.4% of Egyptian youth had daily WP use (2005)
- Decreased Waterpipe Use:
  - In Turkey: 2.3% in 2008 to 0.8% in 2010
  - In Iraq: 6.3% in 2008 to 4.8% in 2012

# Current waterpipe smoking among youth, GYTS 2008-2014

## Gender Difference

# Today's WP Tobacco Product: Key Facts

- Is toxic and carcinogenic
- Is addictive
- Is attractive
- Is inexpensive
- Greatly popularized & evaded regulations

# Waterpipe Tobacco Products: Price

- Very affordable
- Average of 25 - 30 US cents per 10 gm
- Can go up to US 1-1.3 per 10 gm
- Strong link to the entertainment industry
- Prices at cafes and restaurants (\$1-38)

# Key Facts-Warning labels

- Limited compliance with warning labels on packages
- Small size labels & lack of exposure to them
- Warning labels on bottles or bowls
- Misleading information on emissions and contents

# FCTC Article 11: Packaging and labelling of tobacco products

- 1. Each Party shall, within a period of **three years** adopt and implement effective measures to ensure that:
  - (a) Tobacco product packaging and labelling **do not promote a tobacco product** by any means that are false or misleading or any other sign that directly or indirectly creates the false impression that a particular tobacco product is less harmful than other tobacco products.
  - (b) Each unit pack of tobacco products and any outside packaging should also carry health warnings describing the harmful effects of tobacco use, and may include other appropriate messages. These warnings and messages:
    - (i) shall be **approved** by the competent national authority, WHO Framework Convention on Tobacco Control 10
    - (ii) shall be **rotating**
    - (iii) shall be **large, clear, visible and legible**
    - (iv) Should be **50% or more** be no less than **30%** of the display areas
    - (v) May be include **pictures or pictograms**

# Article 11

- 2. Each unit pack of tobacco products and any outside packaging and labelling of such products shall (in addition to the warnings) **contain information on relevant constituents and emissions of tobacco products as defined by national authorities.**
- 3. Each Party shall require that the **warnings and other textual information will appear on each unit pack of tobacco products in its principal language or languages**
- 4. **“Outside packaging and labelling”** in relation to tobacco products **applies to any packaging and labelling used in the retail sale of the product.**

# Countries That Implemented Health Warning Labels on WP products

- In 2012 **Turkey** has extended warning labeling practices by requiring placement of warnings on both sides of the bowls of the waterpipe device to cover 65 % of the surface
- **FDA** requires HWLs on WP packaging by August 2018 covering 30% of surface
- On August 9, 2011, the GSO (**Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, UAE**) adopted a standard, Labelling of Tobacco Product Packages. This standard includes a requirement for picture based health warnings to cover 50% of the package front and back, with an Arabic warning on the front and an English warning on the back

# Countries That Implemented Health Warning Labels on WP products

- In 2014 the **EU** Tobacco Products Directive requires waterpipe tobacco products to carry combined health warnings consisting of a picture from the EU picture library, a text warning and information on stop smoking services. The warnings should cover 65% of the front and back of packages
- In 2014 **Egypt** places four generic pictorial health warnings (PHWs) on the front and back half of waterpipe tobacco packs (WTPs)
- **Lebanon** textual warnings as of March 2012

European Parliament, Council of the European Union. (2014). Directive 2014/40/EU of the European Parliament and of the Council of 3 April 2014 on the approximation of the laws, regulations and administrative provisions of the Member States concerning the manufacture, presentation and sale of tobacco and related products and repealing Directive 2001/37/EC. Official Journal of the European Union.

Mostafa, A., Mohammed, H. T., Hussein, W. M., Elhabiby, M., Safwat, W., Labib, S., ... & Hoek, J. (2018). Plain packaging of waterpipe tobacco? A qualitative analysis exploring waterpipe smokers' and non-smokers' responses to enhanced versus existing pictorial health warnings in Egypt. *BMJ open*, 8(10), e023496.

# Waterpipe specific Health Warning Labels (HWLs):Why?

- Identify risks
- Misconception that smoking waterpipe is less harmful than smoking cigarettes
- Aiming for an effective policy tool to control waterpipe smoking
- Effective & cheap for reducing tobacco use
- WP can be smoked at home or café/restaurant so smokers are usually not exposed to the tobacco packaging

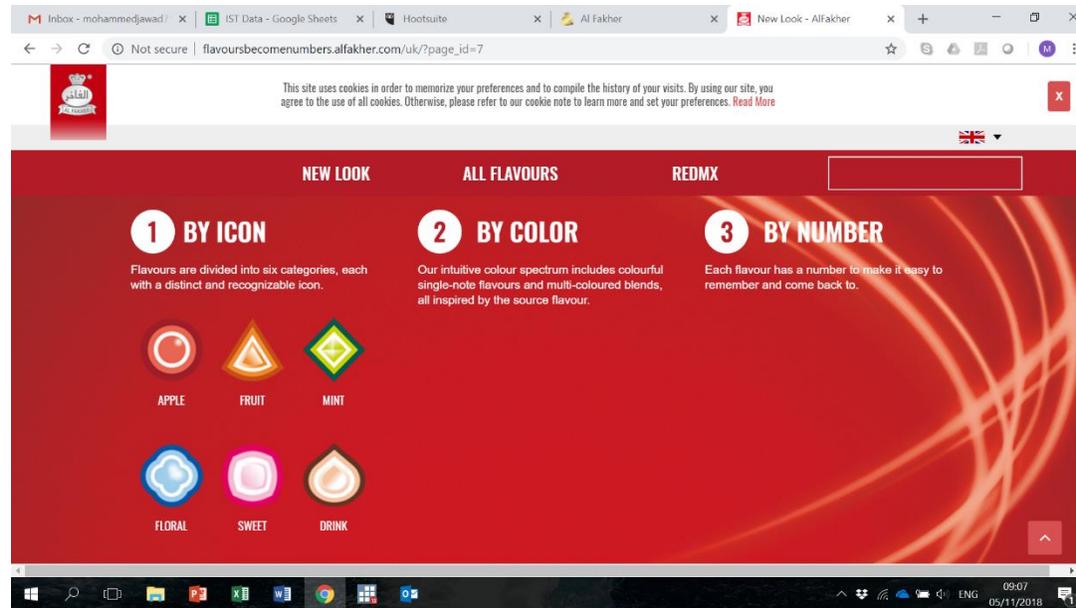

Shape, colour, and number together identify the flavours.

Al-Fakher has to register all their products with the UK

It's meant to be all over the EU (28 countries)

P.O. Box 20037 Ajman - United Arab Emirate Tel.: +971 6 7425500 Fax: +971 6 7425505

# Examples of the HWL WP Device

Mostafa, A., Mohammed, H. T., Hussein, W. M., Elhabiby, M., Safwat, W., Labib, S., ... & Hoek, J. (2018). Would placing pictorial health warnings on waterpipe devices reduce waterpipe tobacco smoking? A qualitative exploration of Egyptian waterpipe smokers' and non-smokers' responses. *Tobacco control*, tobaccocontrol-2018.

# Policy-Relevant Context of Waterpipe Tobacco Smoking among University Students in Six Countries Across the Eastern Mediterranean Region: A Qualitative Study

# Effectiveness of health warnings for waterpipe tobacco smoking among college students

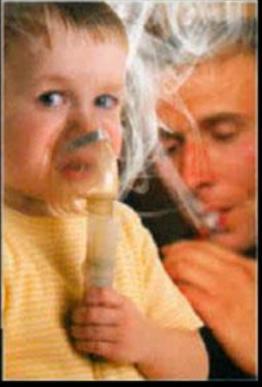

**WARNING**

Despite its pleasant smell, hookah smoke kills.

**WARNING**

Protect your children:  
Don't let them be exposed to hookah smoke.

**WARNING**

Hookah smoke contains rat poison.

**WARNING**

The water in hookah does not prevent toxic materials from reaching your body.

# Eliciting preferences for waterpipe tobacco smoking using a discrete choice experiment: implications for product regulation

## Hookah Lounge Menu

	<p><b>Double Apple</b> If you love apple, here's the hookah tobacco for you. Big and puffy, sweet and fruity clouds. <i>0.05% nicotine</i></p>	\$10	<input type="radio"/>
	<p><b>Blue Mist</b> Very sweet blueberry flavor with a hint of mint that comes out in the aftertaste. <i>0.0% nicotine</i></p>	\$20	<input type="radio"/>
	<p><b>Pirate's Cave</b> Creamy, juicy and extremely sweet aroma. Reminiscent of a lime margarita. <i>0.0% nicotine</i></p>	\$5	<input type="radio"/>
	<p><b>Non-flavored</b> Tobacco that takes you back to rich, smooth traditional flavors. <i>0.5% nicotine</i></p>	\$10	<input type="radio"/>
<p><b>WARNING: Hookah smoking causes fatal lung disease</b></p>			<input type="radio"/>
			<b>None of the above</b> <input type="radio"/>

Which of the four options above would you be *most likely* to choose?

# WPS Regulation

- Obviously we are dealing with a product that **requires** regulation and immediate action!
- How to go about it?

# WHO FCTC - MPOWER

- **M**onitor tobacco use & prevention policies
- **P**rotect people from tobacco smoke
- **O**ffer help to quit tobacco use
- **W**arn about the dangers of tobacco
- **E**nforce bans on tobacco advertising, promotion and sponsorship
- **R**aise taxes on tobacco

# Targets for Product Regulation

- Ingredients (tobacco leaves, flavorings and additives, heavy metals, etc...)
- Emissions
- Addictiveness (Dependence Potential)
- Attractiveness
- Design features

ADVISORY NOTE

---

# Waterpipe tobacco smoking:

health effects, research needs and  
recommended actions for regulators

---

2nd edition

WHO Study Group on Tobacco Product Regulation (TobReg)

# Policy Recommendations

WHO FCTC article	Specific policy recommendations for waterpipes
<b>Article 5</b>	<b>General obligations.</b> Even in countries with well-established tobacco control programmes, waterpipe tobacco smoking may be underrepresented or exempted because of its novelty in some countries and its long-standing traditional presence in others. Legislation and regulations on tobacco should specify all tobacco, not just in cigarettes, and should ensure that waterpipe-specific stipulations <sup>9</sup> are included in legislation in countries with a high or increasing prevalence.
<b>Article 5.3</b>	<b>Protection from vested commercial interests.</b> International exhibitions have been held recently to promote waterpipe tobacco products and accessories ( <i>1</i> ). Transparency should be required from waterpipe tobacco and accessory companies that are advocating for and against legislation and regulation, both directly and through third parties. No matter what role the tobacco industry plays in the production, distribution and sale of waterpipes and waterpipe products, this industry, its allies and front groups can never be considered a legitimate public health partner or stakeholder while it continues to profit from tobacco and its products or to represent its interests.

<b>Article 6</b>	<b>Price and tax measures to reduce the demand for tobacco.</b> Because tax measures have been shown to reduce tobacco consumption, especially by young people, Parties should implement both tax and price measures on waterpipe tobacco and waterpipe products.
<b>Article 8</b>	<b>Protection from exposure to tobacco smoke.</b> Because all second-hand tobacco smoke has the potential to cause death, disability and disease, waterpipes should be included with cigarettes in clean indoor air policies. Waterpipe cafés or lounges should not be exempt from clean indoor air legislation.
<b>Articles 9 and 10</b>	<b>Regulation of the contents of tobacco products and tobacco product disclosures.</b> Policy should be implemented to ensure that waterpipe tobacco is included in legislation requiring the testing and regulation of tobacco contents and emissions, as well as the reporting thereof.
<b>Article 11 a</b>	<b>Health claims.</b> Waterpipe tobacco packaging and all waterpipe parts and accessories must not promote any misleading understanding about tobacco or give an erroneous view of the dangers inherent in its use.
<b>b</b>	<b>Health warnings.</b> Waterpipe tobacco, product packaging and waterpipes themselves should be labelled with health warnings in accordance with Article 11 of the WHO FCTC.

# Policy Recommendations

<b>Article 12</b>	<b>Education, awareness and training.</b> Given the prevalence of misinformation surrounding the health dangers of waterpipe tobacco smoking, specific education and training must be included in wider tobacco education and public awareness programmes implemented by Parties.
<b>Article 13</b>	<b>Advertising, promotion and sponsorship.</b> A comprehensive ban on advertising, promotion and sponsorship of waterpipes should be included under Article 13 of the WHO FCTC. Parties not in a position to undertake a comprehensive ban should strongly restrict such advertising, promotion and sponsorship.
<b>Article 14</b>	<b>Demand reduction measures concerning tobacco dependence and cessation.</b> In accordance with the measures listed in Article 14 of the WHO FCTC and the guideline, Parties should include waterpipe tobacco smoking in cessation and treatment programmes for tobacco dependence.
<b>Article 15</b>	<b>Illicit trade in tobacco products.</b> Legislation and measures prohibiting illicit trade in tobacco should follow the guidelines set forth in Article 15 of the WHO FCTC and should ensure that waterpipe tobacco is included with cigarettes and all other forms of tobacco.

<b>Article 16</b>	<b>Sales to and by minors.</b> Sales of all tobacco, including waterpipe tobacco, should be prohibited to minors under Article 16 of the WHO FCTC. Waterpipe venues should not be an exception to this legislation.
<b>Additionally</b>	<b>Product design and information.</b> Waterpipes and waterpipe products should be regulated to: <ul style="list-style-type: none"> <li>– minimize the content and emissions of toxicants;</li> <li>– ensure that any nicotine used is of pharmacological quality;</li> <li>– minimize acute nicotine toxicity;</li> <li>– minimize CO toxicity from heated charcoal;</li> <li>– impede product alteration to include other drugs;</li> <li>– ban waterpipe tobacco with alcohol and sweet-like flavours that may appeal to children and young people;</li> <li>– require manufacturers and importers to disclose to government authorities information about the contents and emissions of waterpipe tobacco smoking; and</li> <li>– require registration of manufacturers and importers with government authorities.</li> </ul>
	<b>Surveillance and monitoring.</b> It is recommended that governments use or strengthen existing tobacco surveillance and monitoring systems to assess the current prevalence and the evolution of waterpipe use in various demographic groups, including by gender and age.
	<b>Assessment of fire risk.</b> The use of charcoal poses a regulatory challenge regarding its contribution to fires, which should also be assessed, and Parties should consider establishing monitoring systems for that purpose (1).

# Suggested Actions for Regulators

WHO FCTC Article	Suggested actions for regulators
<b>Article 6</b> <b>a</b>	In order to conform to Article 6 of the WHO FCTC, Parties should both implement tax measures on tobacco products and restrict or prohibit importation and sale of duty-free tobacco and waterpipe products.
<b>b</b>	The goal of tobacco taxation is to decrease demand by discouraging purchasers by cost. Therefore, the tax should actually be prohibitive. If waterpipe tobacco is taxed only in bulk (e.g. by kg), it is still relatively inexpensive for individual users. Parties should consider taxing waterpipe tobacco per individual serving or at higher bulk prices.
<b>c</b>	Waterpipes themselves, as well as parts and accessories, should also be taxed.
<b>d</b>	Waterpipes, waterpipe tobacco, parts and accessories should be prohibited or restricted from being sold tax- or duty-free.
<b>Article 8</b>	Waterpipe cafés or lounges must not be exempted from clean indoor air laws, as they are in some countries where waterpipes are traditionally smoked. Indoor waterpipe smoking in public areas should be prohibited and smoking allowed only outside. Waterpipe venues should not be allowed within large shopping areas, such as indoor malls.
<b>Articles 9 and 10</b>	Waterpipe tobacco and waterpipe smoke should be tested by the same stringent standards that are applied to cigarette tobacco. Legislation should ensure that waterpipe tobacco is not exempt from testing and regulation of contents and emissions. The results of the testing of contents and emissions should be reported to the appropriate government body. Effective measures should be in place to disseminate information to the public about the toxicity and emissions of waterpipe tobacco smoking.

<b>Article 11.1</b> <b>a</b>	<b>Health claims on packaging and labelling.</b> In accordance with Article 11 of the WHO FCTC, Parties should prohibit manufacturers and third parties from making health claims for waterpipe tobacco smoking and should prohibit deceptive descriptors that infer claims of health or safety (e.g. “contains 0% tar or 0.05% nicotine”). This must also apply to accessories, including claims made for charcoal (“odourless”, “free of chemicals”, “100% natural”). Even “tobacco free” or “herbal” waterpipe alternatives contain large doses of toxicants, and the packaging should not be allowed to carry health or safety claims.
<b>b</b>	<b>Health warnings on packaging and labelling.</b> Health warnings should indicate the various harmful effects of tobacco use and should: <ul style="list-style-type: none"> <li>– be approved by a competent regulatory body;</li> <li>– be rotated at set intervals (e.g. every 12 months);</li> <li>– be large, clear, legible and visible;</li> <li>– cover no less than 30% of the principal display area (i.e. not hidden on the bottom or side where it might not be seen); and</li> <li>– be in the form of or including pictures or pictograms.</li> </ul> Warning labels must be placed on waterpipe tobacco packaging and also on all accessories and on waterpipes themselves. Labelling waterpipe tobacco is not sufficient, as smokers may not see the packaging (if they smoke in a bar or café). As waterpipe parts, charcoal, filters and mouthpieces can be sold separately, warning labels should be affixed to all individual packaging. Regulation should go beyond the placement of warning labels on waterpipes. Waterpipes are considered aesthetically pleasing as well as functional, and manufacturers and smokers may resist or remove labelling that is considered to mar the beauty of the waterpipe. This should not be allowed. Because waterpipes present a novel challenge in terms of the placement of warning labels (on the waterpipe itself as well as accessories), pre-market testing of warning label placement would be useful, as would monitoring of placement options found to be successful in trials.

# Suggested Actions for Regulators

<b>Article 12</b> <b>a</b>	Comprehensive education and public awareness programmes on the dangers of waterpipe smoking should be implemented. Programmes should specifically address the fallacy that waterpipe smoking is safer or healthier than smoking cigarettes.
<b>b</b>	Education and programmes for and about the benefits of cessation should be widely available.
<b>c</b>	Training on and awareness of the dangers of waterpipe smoking should be provided for health workers, community workers, social workers, media professionals, educators, decision-makers, administrators and all those who are pivotal in tobacco control and health care.
<b>Article 13</b> <b>a</b>	Any form of waterpipe advertising, promotion and sponsorship must be regulated by an appropriate government body. This can be done most easily by making certain that waterpipes are included in all legislation and regulations governing cigarette advertising, promotion and sponsorship, without exception.
<b>b</b>	The regulations must be adapted to the unique feature of waterpipe vending, namely, that most advertising, promotion and sales are through the Internet.
<b>c</b>	At a minimum, Parties' regulations on advertising, promotion and sponsorship of waterpipes must: <ul style="list-style-type: none"> <li>– not make them appealing to or target, either explicitly or implicitly;</li> <li>– non-smokers or non-nicotine users;</li> </ul>

	<ul style="list-style-type: none"> <li>– not make them appealing to or target, either explicitly or implicitly, minors, including through the selection of media, the location or the context in which they appear or through imagery that promotes sexual or sporting prowess;</li> <li>– encourage quitting smoking, and provide a quitline number if one exists;</li> <li>– not contain health, safety or medicinal claims;</li> <li>– not undermine any tobacco control measure, including not promoting exemption of waterpipe cafés from clean indoor air policies;</li> <li>– include factual information about the product's ingredients in a way that does not distort evidence of risks;</li> <li>– not link these products with gambling, alcohol, illicit drugs or activities or locations in which using them would be unsafe or unwise;</li> <li>– clearly state the addictive nature of nicotine and that these products are intended to deliver nicotine; and</li> <li>prohibit suggestions that waterpipes have positive qualities.</li> </ul>
<b>d</b>	All authorized forms of waterpipe advertising, promotion and sponsorship must be cleared by the appropriate authority prior to publication or transmission in order proactively to prevent inappropriate marketing and then monitored to assess compliance with approval.
<b>Article 14</b>	<p>Cessation programmes for tobacco dependence should include waterpipe tobacco smoking dependence. The interventions should target the unique features that make waterpipe smoking appealing and thus difficult to quit:</p> <ul style="list-style-type: none"> <li>– the appeal of the aroma,</li> <li>– the pleasant bubbling sound and</li> <li>– the social atmosphere or bonding and sharing over a waterpipe.</li> </ul>
